

Merge two sorted arrays 7

m=4

0	1	2	3	
1	3	3	7	(m)

n=4

0	1	2	3	
2	4	4	8	(n)

ans

1	2	3	3	4	4	7	8
---	---	---	---	---	---	---	---

pseudo code

1) $\text{int } i=0, j=0$

2) traverse until $i < m \ \&\& \ j < n$

2.1) compare $\text{arr1}[i]$ and $\text{arr2}[j]$

$\text{arr1}[i] < \text{arr2}[j]$

$\text{ans.add}(\text{arr1}[i]); i++;$

2.2) $\text{ans.add}(\text{arr2}[j]); j++;$

3) while($j < n$) {

$\text{ans.add}(\text{arr2}[j]);$

$j++;$
}

4) while($i < m$) {

$\text{ans.add}(\text{arr1}[i]);$

$i++;$
}

handling
duplicacy

Ans:-

$$\begin{array}{cccccccc} & & i & & & & & \\ & & \downarrow & \curvearrowright & & & & \\ [1, & 2, & 3_a, & 3_b, & 4, & 4, & 7, & 8] \\ 0 & 1 & 2 & 3 & 4 & 5 & 6 & 7 \end{array}$$

Ans. remove(2)
$$\begin{array}{ccccccc} [1, & 2, & 3_b, & 4_a, & 4_b, & 7, & 8] \\ 0 & 1 & 2 & 3 & 4 & 5 & 6 \end{array}$$

Ans. remove(3)
$$[1, 2, 3, 4_b, 7, 8]$$

code

```
public static void mergeArrays(int[] arr1, int m, int[] arr2, int n) {  
    ArrayList<Integer> ans = new ArrayList<>();  
    int i = 0;  
    int j = 0;  
    while ( j < n && i < m ) {  
        if ( arr1[i] < arr2[j] ) {  
            ans.add( arr1[i] );  
            i++;  
        } else {  
            ans.add( arr2[j] );  
            j++;  
        }  
    }  
  
    while ( i < m ) {  
        ans.add( arr1[i] );  
        i++;  
    }  
  
    while ( j < n ) {  
        ans.add( arr2[j] );  
        j++;  
    }  
  
    int idx = 0;  
    while ( idx < ans.size() - 1 ) {  
        if ( ans.get(idx) == ans.get(idx + 1) ) {  
            ans.remove(idx);  
        } else {  
            idx++;  
        }  
    }  
  
    for ( int k = 0; k < ans.size(); k++ ) {  
        System.out.print( ans.get(k) + " " );  
    }  
}
```

until
both pointer
are with
in array

for
remaining
elements

to handle
duplicacy

for
printing

⇒ Stack

(LIFO)
↳ last in first out

↳ same as arraylist but
we can only add and remove
element from 1 side

restriction

stack

⇒ In-built Functions

syntax

Stack < DataType > st = new Stack < > ();

↳ Integer, Boolean, - - - -

To add an element in stack : st.push(element)

To remove an element in stack : st.pop()

To get top element in stack : st.peek()

To get size of stack : st.size()

To check for empty stack : st.isEmpty()

Code

Stack Syntax Learning

```
public static void main(String[] args) {
    Scanner scn = new Scanner(System.in);
    Stack<Integer> st = new Stack<>();
    int t = scn.nextInt();
    for (int i = 0; i < t; i++) {
        int c = scn.nextInt();
        if ( c == 1 ) {
            printSize(st);
        } else if ( c == 2 ) {
            removeElement(st);
        } else if ( c == 3 ) {
            int x = scn.nextInt();
            addElement(st, x);
        } else if ( c == 4 ) {
            printTopElement(st);
        }
    }
}

public static void printSize(Stack<Integer> st) {
    System.out.println( st.size() );
}

public static void removeElement(Stack<Integer> st) {
    if ( st.isEmpty() ) {
        System.out.println("-1");
        return;
    }
    st.pop();
}

public static void addElement(Stack<Integer> st, int x) {
    st.push(x);
}

public static void printTopElement(Stack<Integer> st) {
    if ( st.isEmpty() ) {
        System.out.println("-1");
        return;
    }
    System.out.println( st.peek() );
}
```

Reverse string

str = "abcdeefg"
 ↑

ans = "gfedcba"

code

Reverse string

```
public class Solution {  
  
    public static void main(String[] args) {  
        Scanner scn = new Scanner(System.in);  
        String str = scn.nextLine();  
  
        Stack<Character> st = new Stack<>();  
        for (int i = 0; i < str.length(); i++) {  
            char ch = str.charAt(i);  
            st.push( ch );  
        }  
  
        String ans = "";  
        while ( st.size() > 0 ) {  
            char top = st.peak();  
            ans += top;  
  
            st.pop();  
        }  
  
        System.out.println(ans);  
    }  
}
```
